Projects

Calculator App: This calculator was built using AngularJs and plain Javascript.

ChronoTimer: This group project is currently in its third sprint. It's written in Java, and can handle multiple race types as it times races.

Weather App: This app gives data about the weather in the users area through geolocation. It uses XMLHTTPRequest to gain data from the FCC-Weather API.

Twitch Viewer App: This application uses the Twitch API to receive data on streamers. The method of extraction is through AJAX.
